**Allowable Subject Matter**

The following is an Examiner's statement of reasons for the indication of allowable subject matter: Applicant(s) claimed invention is directed to a branched aromatic polycarbonate having improved melt properties, hue and residence stability.

The crux of the invention lies in the discovery that a branched aromatic polycarbonate having specific structural units in its main chain in a specific amount has improved fluidity under a high load, improved hue and residence stability while avoiding the problems commonly associated therewith. With regard to the previously applied art of record **EP 0736561**, the hydrogen in the structure does not allow for the substitution of the *CO next to the OH group* in formulas 1, 2, 3 and thus a mixture would exist instead of the specific moiety as claimed. With regard to the **JP2000-159880** reference, the translation discloses on page 1 of the translation (claims) that structure 1 does not have an *OH group next to a CO group*. With regard to the newly submitted JP reference, i.e. **JP 08-245465**, which is directed to a bisphenol for polymers, capable of minimizing yellowing in polymerization or molding process by adding a specific amount of a specific phenol to 4'-bisphenol, the moieties employed therein are not the specific structurally claimed moieties and thus do not result in the particularly branched aromatic polycarbonate as discussed. Thus, the art of record demonstrates other aromatic polycarbonates produced in the art which do not, however, contain the advantages as mentioned and neither avoid the problems commonly associated therewith.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should
